

PUBLIC WORKS & MUNICIPALITIES SAFETY

Public Works & Municipalities professionals with safety training are less likely to put themselves in dangerous situations.

It's considered to be good policy to have your Public Works & Municipalities professionals trained to at least the minimum federal standard.

In the event an accident occurs, having trained workers provides a reasonable defense that employees are trained and are provided with the knowledge and proper equipment to conduct their job safely and efficiently. It is also considered good policy to retrain employees every 3-5 years.

Pike Consulting Group provides the flexibility and scalability to organize and conduct formal Safety Training Classes for all the municipal employees. Pike Consulting Group's experienced and OSHA Authorized instructors provided classes that engage workers with instructor-led training relative to their fields.

Participants are tested on their knowledge of the content covered in the classes and city leadership was provided with confirmation of the results.

On-site, Instructor-led Safety Training for your workforce includes Road Crews, Water Departments and Building Maintenance Staff.

Safety Training Classes by OSHA Authorized Instructors:

- CPR/First Aid
- Confined Space (Permitted & Non-Permitted)
- Competent Person Training
- Fall Protection
- Trenching & Excavation
- Scaffolds & Ladders

Pike Consulting Group Safety Training classes feature flexible scheduling and scalable resources.

The Problem

If Safety Training Classes are provided for employees, and they don't pay attention, the critically important material covered will not be retained nor will behaviors be changed to improve safety.

Public Works & Municipalities Managers should be aware of the need for an effective and robust safety system. However, knowing where to begin can feel daunting. And how could they best budget for implementing a full-schedule of Safety Training Classes for the workers that needed them?

The Solution

To ensure your Safety Training Program provides a safe and productive working environment for all employees, we offer our services in managing the required components of your safety compliance system. Pike Safety Compliance Systems are always evolving so we rapidly adjust to new OSHA directives.

This is possible through assessing the directives, developing systems to address them, and vetting many options. Then, we put in place the most effective path for each department and train your employees on safe work practices and safety standards.

Benefits to Your Organization:

- A safe working environment for your employees
- Limited employee exposure to life-threatening hazards
- Fewer injuries due to untrained workers
- Reduced Workers' Compensation claims
- Lowered litigation risk and expense
